PROFESSIONAL SUMMARY

Data Engineer with hands-on experience building scalable data platforms, designing end-to-end ETL pipelines, and integrating large-scale datasets using modern cloud tools. Established the data foundations of a 50-person organization, driving the adoption of data best practices from the ground up.

SKILLS

- **Programming languages:** Python, SQL, JavaScript, Typescript, React, Go, HTML, CSS
- **Technologies and Frameworks:** Docker, GCP, AWS, PostgreSQL, Mage, Git, Looker
- **Data Engineering:** Data ingestion, enrichment, pipeline orchestration, data platform deployment
- **Language:** French (Native), English (C2)

EXPERIENCE

- **SIRIS Academic** Barcelona, Spain
Data Engineer - Full time Aug 2024 - March 2026
 - One of two data engineers in a 50-person company, building the data foundations from the ground up
 - Main contributor to an internal data orchestration **Github** repo using **Mage**, defining reusable pipeline patterns and improving maintainability
 - **Built and deployed 30+ scalable ETL pipelines in Python** to automate ingestion and enrichment of institutional datasets using Hugging Face NLP models
 - Designed and maintained a modular data platform using **Docker**, **GCP**, **PostgreSQL**, and **S3**, ingesting data from 5 open-source sources
 - Authored technical documentation to accelerate onboarding and ensure knowledge transfer across teams
 - Designed and delivered **Looker** and **Apache Superset** dashboards to support business analysis needs across cross-functional teams (analysts, PMs), enabling data-driven decision making
- **Dataiku** – *Software Engineer - Intern* Paris, France, Mar 2023 - Sept 2023
 - Engineered a platform feature using **DuckDB** to allow non-technical users to join datasets without SQL
 - Developed backend components with **Node.js**, **TypeScript**, and **microservices architecture**
 - Contributed to frontend UI integration in **React/Redux**, improving usability of data workflows .
- **Capgemini** – *Python Developer - Intern* Paris, France, Aug 2021 - Jan 2022
 - Built 5 predictive models for **stock market time-series forecasting** using Python
 - Integrated a **YOLOv4 deep learning model** into a real-time video surveillance system

PROJECTS ON GITHUB

- **PolymarketPricer** – Full-stack analytics platform for Polymarket prediction markets
 - Designed and orchestrated 13 ETL pipelines (12 data + 1 orchestration) validating and ingesting 50,000+ markets across 8 categories, with a 10s refresh interval for real-time alerts
 - Built a **FastAPI** backend exposing 29 endpoints (including real-time WebSocket feeds) with rate limiting (60 req/min), backed by a **PostgreSQL** database of 22 tables and 21 ORM models managed through 22 Alembic migrations
 - Ensured reliability with 235+ unit and API tests, and containerized the full stack (PostgreSQL, Mage, FastAPI, Next.js) into 4 Docker services
- **Dofus.js** Building a WebSocket infrastructure in Go; containerizing the full-stack application using Docker; front in React

EDUCATION

- **Ecole Polytechnique Feminine** Paris, France
Software and Data Engineering - AI 2020 - 2024
- **Universitat Politècnica de Catalunya** Barcelona, Spain
Data Science and AI – Python, R, Algorithms 2022 - 2023
- **Advanced program for students preparing top engineering schools (CPGE)** Paris, France
MPSI - PSI: advanced Mathematics and Physics 2017 - 2020
